

Ô MUSE SPRING WATER

PREMIER CRU

NATURAL SOURCE OF LIFE

1) History

At the heart of the natural regional park of the Vosges Mountains, surrounded by fabulous vineyards, in a preserved environment, the Ô Muse Premier Cru Spring Water has been discovered in 1272 by a Franciscan monk.

Our Alsace spring water was probably known in the Roman epoch but it was first exactly mentioned in the year 1272 by a Franciscan monk. Kept by the mountains as a precious secret the source was discovered again in the 17th century and thermal baths were built in 1662 (extended in the 18th century).

In 1838, the source became famous in the whole Europe. The bi-carbonated water, especially good for stomach ache, liver, kidney and bladder diseases, was always drunk there and has been sold in bottle since 1853.

On March, the 29th 1865, the source was declared as national public interest by an imperial decree made by Napoleon the 3rd and after advice from the Medicine Academy of Paris.

2) Environment

It takes decades for Ô Muse Premier Cru spring water to slowly infiltrate the sandstone of the Vosges Mountains and reach its extraction point. This natural filtration process brings a well balanced mineralization and amazing health benefits.

Ô Muse Premier Cru spring water composition and its high content of bicarbonates explain its great digestibility. The lightness of the water makes it perfectly suitable for any moment of the day and consumable with no limit.

3) Ô Muse Premier Cru Spring Water Composition

- Ô Bicarbonates, 486 mg/L, explain the great digestibility and lightness,
- Ô Calcium, 73 mg/L, is essential for the formation and maintenance of the bones and teeth, for the blood pressure regulation and blood coagulation,
- Ô Magnesium, 28 mg/L, helps fighting stress, has anti-allergy and anti-inflammatory effects, facilitates the transmission of nerve impulses
- Ô Sulfates, 29 mg/L, has diuretic properties and eliminates the toxins from the body,
- Ô Fluor, 0,78 mg/L, helps preventing tooth decays and binding of calcium in bones, mainly during child growth,
- Ô Potassium, 14 mg/L, distributes the water in the body, regulates the blood pressure, prevents kidneys stones, facilitates the transmission of nerves impulses and helps to decrease cramps,
- Ô Chlorides, 15 mg/L, regulates the osmotic pressure between compartments and maintains the electric neutrality of the body,
- Ô Sodium, 61 mg/L, facilitates the transmission of nerves and muscular impulses, distributes the water in the body and improves the blood pressure

Available: still or sparkling

Glass bottle: 33cl, 50cl or 1 litre

4) Technical Sheet

The Promise of a Great Vintage

Tasting

The pure and clean taste of our Still water is offering a great sense of quality. From a fantastic terroir, with a great lightness and freshness, without any disturbing aftertaste, the Cuvée Nature of Ô Muse Premier Cru is an invitation to the table.

Open the bottle of our sparkling water and start the travel. Gently waking up your palate with small fine bubbles the Cuvée Lightly Sparkling is an excitement for your soul and will sublime your day.

Service

It is recommended to serve it cold or at ambient temperature.

Food pairing

Drinkable easily without any food, this water will perfectly accompany all dishes from any cuisine.

2008: voted Best French Slightly Sparkling Water at the International SPA & Beauty in Paris

2009: Jury Special Grand Price at SPA & Beauty International Fair in Paris

Comment

The association of bicarbonates and sodium does not distort the taste of the dishes and thus respects the flavor of the meals.

Our Ô Muse can be drunk without concern, for the pleasure of the body and the mind.
